Abstract: Metal lost was presented through mineral processing poly-mineral lead-zinc in concentrator Badovc in Kizhnica-Kosova in this study. Reasonable study, this live issue is because in practical processing mineral we have lost metal in flow of Artana. Lost research in metals has an important theoretical, but more practical where we need this mines lead zinc with flotation five year ago restarting production processing. In this base reaches in conclusion for optimal choose processing for decrease louts metal along processing mineral.
