Abstract: The land presents a specific natural-historical body, respectively the rake surface of the earth as a result of effects from joint pathogenesis factors (climate, water, vegetation, relief and time). The spreading and use of land in the territory of the Republic of Kosova is not equal, therefore a research for the use of land in the Lowland of Kosova is very important, especially urbanism because of the concentration of population and uncontrolled development of. The general surface of the lands divides as follows: fields 100713 ha, meadows 14803.4 ha, grass-plots 30158.5 ha, groves 2436.8 ha, non-fertile land 1532.3 ha. The greatest part of arable land mostly has agricultural cultures, respectively grain and corn, and the other part has industrial fruits and vegetables.

Key Words: *Land, Resource, Quality and value, Lowland.*
