Abstract: This paper seeks to present in a concise manner the outlook on the performance of Nigeria economy and the state of infrastructural development and management. It provides a clear view on the economic impact infrastructure has on holistic nation building. It is a reality that without the significant development of economic and social infrastructures in a country particularly Nigeria the pace of economic development could become extremely slow and economic productivity virility or retarded. Nigeria is an apt example of a country in which the performance of the economy cannot be equated to the degree of infrastructural growth due some certain factors such as: the allocation of resources, the pace of industrial growth, the level and efficiency of investment and industrial competitiveness. Special focus is given to insight of economic and social infrastructural as the two major branch of infrastructural development in any state. A look at the strategic procurement options through the use of public private partnerships (ppp) as a valuable alternative to traditional procurement is also explored. Both effects contribute to economic growth by stimulating aggregate supply as well as demand.

Key words: *performance, Infrastructural development and management*
