**Abstract:** In India, unsystematic E-waste handling is a major challenge. Over last two decades, escalating generation rate, varying composition and unorganized recycling have made the E-waste handling a complicated practice. Hazardous metals and plastics are major issues and concern when E-wastes are mixed with municipal solid waste along with its haphazard dumping. A skillful management and planning is urgently required for systematic and scientific handling of E-waste.

**Keywords:** *E-waste, metals, plastics, environment.*
